

AVI - Country Support Table

Country Support Table

Listed below are all of the countries that the service supports and is able to validate. The service offers a cascading type of logic and validation level. The chart below will highlight that maximum expected verification level for each country. The chart below will also highlight which countries are able to return a local language in the output. Note that some countries may have several spellings or alternate names that are not listed below, but may be supported by the service. If you need validation for a country that is not currently supported, please contact us. Service improvements are continuously being rolled out and our development team can investigate supporting your desired countries in future updates.
